How Does Owl Token Sustain Such High APy

- 25% percent of supply is reserved for staking rewards. Staking works on a high bonding curve. After emission of certain number of tokens the Apy goes down.

- Our buy and sell transactions have a high tax which will increase the deflationary nature of the token.
- Non-stop marketing: From press releases, youtubers, and key influencers are in line to attract new crowd to the project and maintain huge volume day in and day out.
- Endless development: Major developments and releases are in line to sustain and boost the longevity of the ecosystem.
