It has long been suspected that over 500 years ago a group of 30 owls joined a life altering ritual when they consumed a mystical and magical mineral. What that mineral was is yet to be known, nevertheless after each owl consumed the mineral, they couldn't help but fly higher and higher until one day they landed on the moon. The owls are said, according to legend gained levels of intelligence far superior to one could imagine. Some breeds of owls attained supernatural physical strength since their journey began.

Almost 500 years later these owls have cultivated and formed habitats on various lands on the moon. They now call this the "Moon Economy". The rate of invention and technological advancements made by the owls within the moon economy is unmatched by any other current living society. Central in this moon economy the owl residents and token holders get paid for their services. As production on the moon has increased the moon economy is projected to surge tremendously with early residents gaining the most from inhabiting the territory early. The owls who reside on the lands of the moon are continually working on releasing new exciting products and constantly innovating at an abnormally quick rate. The statement of development issued shows that the following looks to be the upcoming developmental releases.

Roadmap Breakdown

Phase 1

☑ Concept Development
☑ AI Price Prediction Model Development
☑ Smart Contracts
☑ KYC/Audits

☑ Website Release
☑ Press Release
☑ Pre Launch Marketing

Phase 2

☑ NFT Launch
☑ NFT Reveal
☑ Post Launch Marketing Campaign
☑ Twitter Campaign
☑ AI Price Prediction Model launch

☑ NFT Trading

Phase 3

☑ Token presale
☑ Owly Bird Game release
☑ NFT Launchpad

Phase 4

☑ Moon Lands sale
☑ Moon Lands reveal
☑ Moon Lands Trading opens
☑ Metaverse Game Launch

AI Based Price Prediction Model For Crypto Currency

The current upsurge in the crypto currency industry compelled the owls to develop an AI based price prediction platform for crypto currency, which would allow them to gain a competitive edge over other traders. At the forefront of the "Moon Economy" is competition and innovation.

A team of owls led the efforts to develop an AI platform for analyzing the cryptocurrency market. The solution combined natural language processing, sentiment analysis, and machine learning algorithms (LSTM) to predict prices for cryptocurrency. It crunches huge amounts of data and tells you which cryptocurrencies to invest in and attempts to maximize your returns.

The product brings value to:

• Private traders who want to receive hints from the system of artificial intelligence and a forecast on the trend of cryptocurrency prices.

• Professional companies that need to evaluate a comprehensive forecast for the whole real-time cryptocurrency market, portfolio management, investments, risk management, etc.

Technology

The owls took it upon themselves to create a Cryptocurrency price prediction solution based on LSTM models and sentiment analysis of Crypto forums and channels. The platform provides the prediction of 5 type of time frames: 'hourly', 'daily', 'weekly', 'monthly' and 'yearly' for every Cryptocurrency individually and displays them in the form of an index.

The processes of price prediction platform are recomputed constantly by AI Engine, which is in a constant and continual update loop. The model works in real time.

www.beyondowls.xyz

Presently, the platform works with a time step of one day and makes forecasts for the 7 days ahead (the forecast interval is adjustable) however, the solution can be applied to hourly input data and the forecast horizon set in hours.

The solution was deployed in Python, Jupyter Notebook. All documentation and the code remain proprietary.

Results

The owls created a fully ready working solution for Cryptocurrency price prediction.

The main challenges were research and selection of the optimal model architecture for Cryptocurrency price prediction within this solution.

Improving prediction quality, optimizing time and resources for model training and real-time prediction. We observed in the results a variance of between 40% - 73% accuracy of prediction.

Our platform is available for members of our token stakers and NFT holders, demonstrating the capabilities of this solution both to specialists in AI and to investment market traders as well as to those interested in investing in this project.

APTOS Owls Collection

ALPHA

These are hardworking owls that fuel the moon economy. Hard working and law-abiding owls that take pride in their land. Their main mission is to live in a well sustained economy which will prove fruitful and provide for their loved ones.

MEGA

These owls are the guardians of their lands. They are constantly roaming their land to protect it from outsiders who may attack. They are extremely protective in nature and have undergone the oath to fight for their land for eternity. They inhibit the warrior gene!

OMEGA

Descendants of the mythic owls and the smartest owls that are extremely well protected. They are constantly innovating, and it is rumoured that their next invention will change the way moon trading and the moon economy works. 'After' mythic, these are the rarest of owls and are heavily guarded by their guardians!
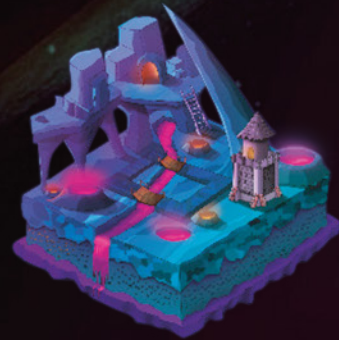

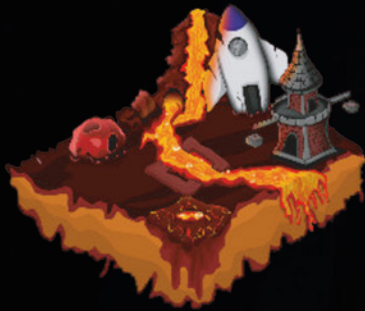

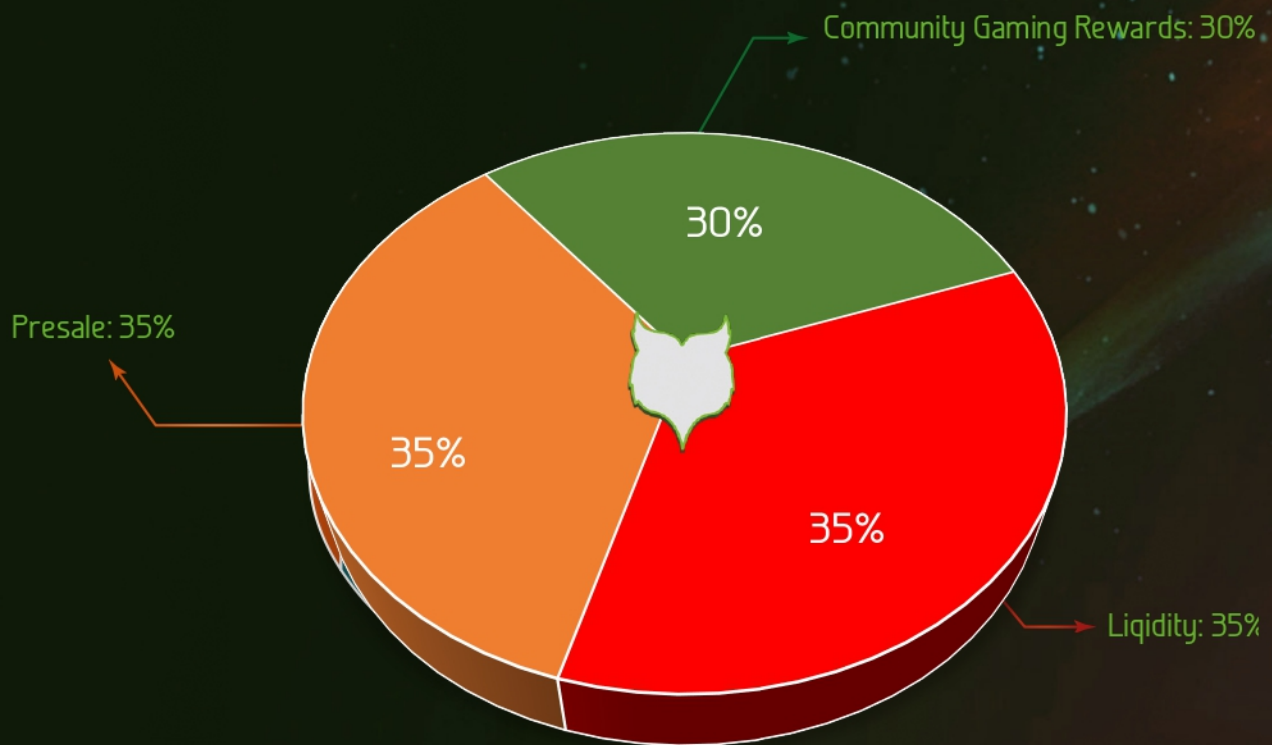

SIGMA

The original group of 30 owls that had consumed the magical mineral and then migrated to the moon. They live in a secret mythical location and overlook the whole "Moon Economy". They possess the ultimate wisdom and are rumoured to be immortal.

It has been 500 years since the owls flew away that one starry night and landed on the moon and although consuming that magical and mythical mineral propelled to the outer limits of the sky. The exact reasoning on why the owls flew away and landed on the moon is still unknown, however, the moon economy has been surging ever since.

The rate of invention and technological advancements made by the owls on their lands is unmatched by any other current living society. Many have suspected it was the rich surface of the moon that attracted these owls to fly higher and higher and to start a new habitat there. Although initially only 30 lands were inhabited by 30 different owls, these lands have now grown exponentially. As the economy on the moon continues to grow and new technologies are released. These lands are projected to become more rich and support the mission of a society that is superior to others in every way possible.

There are 9 different regions on the moon map, each with its own trait and mineral resources. Some are rarer than others providing better opportunity for growth. These lands have become grounds for constant innovation and these owls work hard to protect the safety and security of these lands.
